## WHAT IF ONE SINGLE SOLUTION COULD MAKE THE DIFFERENCE BETWEEN AVERAGE AND FANTASTIC RESULTS, WASTE AND CONTROL OR EVEN LOSS AND PROFIT?

In order to be truly competitive in the modern marketplace, you need to take control of production and stock, making sure that the amount of money spent is put to maximum use. To help you get this competitive edge, Seco® has developed the Seco Point™ concept.

Seco Point's efficiency has helped our customers increase their competitiveness immensely and hence made it the market leader for point of use systems.

Seco Point provides all the means you need to optimize your stock, reduce your costs and a whole lot more. Seco Point makes sure that your production never is halted due to tool loss or low stock levels.

This functionality is available to you directly and automatically. With Seco Point, you configure the information you need, once. After that, just sit back and observe the system doing what it does best; saving you time and money.

The reports generated will prove that the system truly does what we claim. The typical Seco Point installation usually cuts your tool consumption costs in between five to ten percent, immediately upon installation.

Contact your local sales representative for more information about Seco Point!

## YOU GET A LOT OF BUSINESS ADVANTAGES BY USING SECO POINT™:

### 1. SECURE YOUR PRODUCTION

Seco Point also makes sure that products critical to your production always are in stock. Should anything affect the stock levels of these products, you will know immediately by alert mail.

### 2. COST REDUCTIONS

The elimination of overstocking, time spent on re-ordering and manual tool selection leaves a lot of room for cost reductions, typically tool consumption costs drop five to ten percent.

### 3. TOTAL STOCK AND INVENTORY CONTROL

Never worry about stock management again, Seco Point makes sure that stock levels are kept optimal. The system also keeps track of high value tools, making sure that they are returned after being used.

### 4. USER FRIENDLINESS

You no longer have to search for information in complex systems. Seco Point provides you with the information you need, automatically by mail or online, the choice is yours.

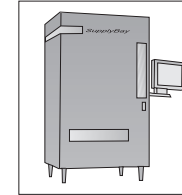

### 5. BUSINESS INTEGRATION

Seco Point can be connected to most modern ERP systems, so that your normal business environment is continuously updated.

Let Seco Point handle your ordering of tools, you will be notified when ordering occurs and can track the usage of the tools down to a certain production cell or user.

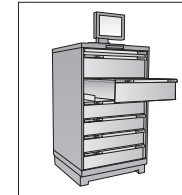

## SECO POINT™ COMPONENTS

### SUPPLYBAY COMPLETE

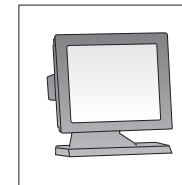

Is the most versatile, industrial-grade vending system available. Performance-engineered for harsh, industrial environments. It delivers reliable dispenses year after year. Designed to handle high-volume throughput and provides trouble-free dispensing for a wide range of industrial tools and supplies.

### SMARTDRAWER - TRIPLE S SERIES

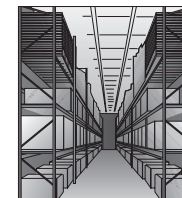

Is a breakthrough technology that provides a low-cost solution to add Point-of-Use control. The technology is extremely versatile and it provides total control for single-item dispensing and returns. The Triple S Series is developed with focus on ease of use and efficiency. Minimized drawers maximize the number of available stock keeping units, and curved wedges in the smaller drawers makes it easier than ever to reach tools.

### SUPPLYLINK

Is a universal control module that drives Seco Point devices. It's easy-to-use touch screen interface is a visual gateway to the SupplyPort and a world of productivity-enhancing information. It can drive one or many SupplyBays, SupplyScanners or SmartDrawers.

### VIRTUAL INVENTORY MANAGEMENT SYSTEM

- High Density control of small, high-consumable products to large industrial products.
- Ability to manage products outside the device (shelves, racks, closets) for small, self-service inventory
- Provides control and eliminates the need for time consuming and costly RFID Tagging or Bar Coding
- Ties in to existing SupplyPro systems via Supply Link
- Provides same re-ordering, reporting and consumption management via SupplyPort
