When you access the Empower Employee and Manager Self Service (ESS) features for the first time, you must enter your employee number, client code, and password to access Empower.

The Empower login pages have been consolidated into a single page, for ease of use.

To access Empower, do the following:

1. Type <https://personal.ecipay.com/Prod/Login/> in your browser and press **Enter**.

The *Login* screen displays.

The screenshot shows the Empower login page. At the top is the logo "Empower by ECI". Below it are two input fields: "Employee #" and "Password". A blue "Login" button is centered below the password field. At the bottom left is a checkbox labeled "Log in as ESS user". At the bottom right is a link "Show Client Code" with a dropdown arrow.

Empower Login

2. Enter your **Employee #** and **Password** in the corresponding fields.
3. Click the [Show Client Code](#) link (this will only be necessary the first time logging in from a particular computer or if your cookies have been deleted).
4. Enter the client code given to you by ECI or your manager in the **Client Code** field that displays, as shown. seco

The screenshot shows the Empower login page with fields filled. The "Employee #" field contains "000066". The "Password" field contains seven black dots. The "Client Code" field contains "XXXXXXXX". A blue "Login" button is centered below the Client Code field. At the bottom left is a checkbox labeled "Log in as ESS user". At the bottom right is a link "Hide Client Code" with a square icon.

5. Check the **Log in as ESS user** box to log in with the ESS role you have access to. Normally, this is the EMPLOYEE role.
6. Click **Login** to access the *Home Page*.

7. Upon login, a drop-down field displays on the right side of the Empower banner listing all roles to which you have access, as shown:

If you do have access to additional Empower roles, you no longer need to log out and log back in to change roles. When you select a different role, the screen automatically refreshes to reflect the options available to that role.

When you log out, and subsequently log back in, the product remembers which role you logged into last and automatically logs you into the same role.
